with their work to ensure that
families get delicious, tasty food
on their tables. ”

Innovation,

which feeds

Modern premix factories

Yasnogorsk

Szalkszentmárton

”

Our **Szalkszentmárton** factory has been producing since 2005 as one of the most modern premix, concentrate and prestarter plants in Europe, while our fully automated premix plant has been operating in **Yasnogorsk**, Russia since 2016, with a 1400 m² vertical production line and a 250 m² world-class laboratory.

Our premix and feed mixes recipes are developed on the basis of **most recent research and practical** results and international recommendations. ”

Our research and development activities are based on

- nutrition experiments and our professionals' and technicians' practical experience (pig and poultry),
- domestic and international technical literature, the
- results of research carried out by raw material manufacturers,
- and we also substantially rely on the technical / professional experience of the professionals and technicians of our partners.

Research and development using innovative technologies

As an innovative company operating in the spirit of continuous development, we have established our own test plant in Lovászpatona, where we can conduct European-standard feeding experiments for ourselves and external customers also.

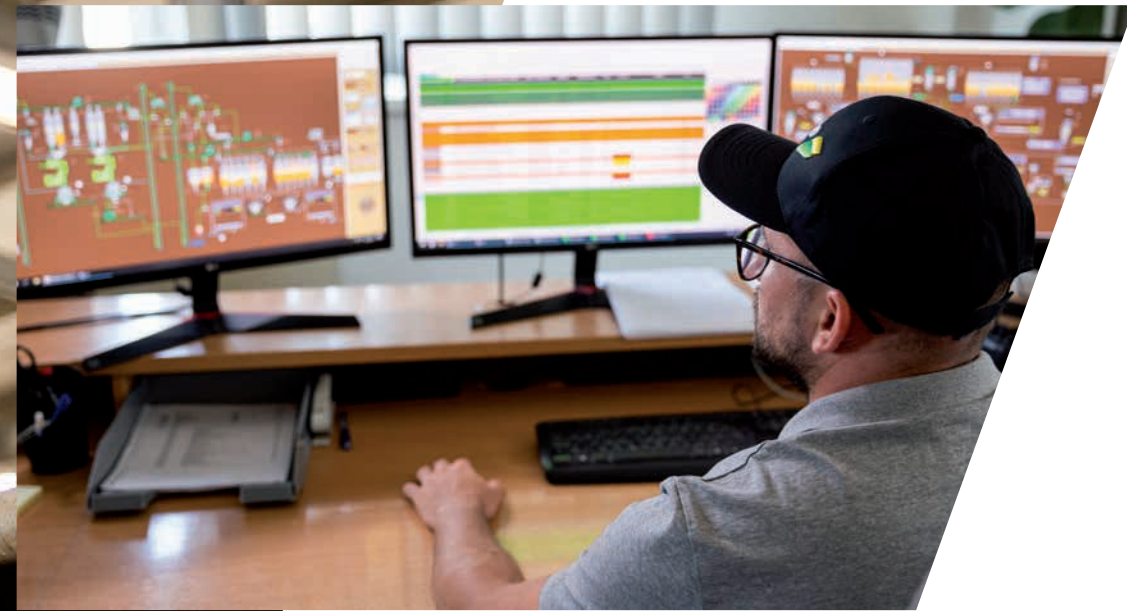

The result of care:

Feeding solutions that improve profitability

We opened our own fermentation plant in Szalkszentmarton.
The aim of our project is to use the domestic grain and protein sources, and improve the production and animal health status of livestock with innovative wet fermentation technology based on their by-products. ”

The result of the innovation: a fermentation plant in Szalkszentmarton

- application of accredited FAMI-QS V6 (GMP+, QS) and ISO 22 000 (HACCP) systems of international recognition
- the quality management systems cover the entire production process and distribution, guaranteeing continuous, reliable quality
- use of the Navision corporate governance system for reliable traceability
- regular checks of supplies and products in our own and in external accredited laboratories
- close collaboration with the internationally recognised LUFA laboratories.

Quality, that counts

Our quality control inspection is based on the application of accredited, internationally recognized systems, which cover the entire production and distribution. ”

Agrofeed is committed to sustainable development, so it places great emphasis on the use of recyclable packaging. We keep this in mind for our new investments the optimal use of natural resources, the incorporation of environmentally efficient methods. In the course of our work, we deal with social and economic development and environmental protection in a complex manner. ”

it for the future generation

It is expertise behind all products,
including food, that creates value.
We work with colleagues who are
the best in their profession.

Expertise,

which feeds

Our specific products for different animal species

Each of our three divisions aim to provide our partners with unique, buyer-specific products in addition to some popular standard product types for farmers, primarily in the cattle segment. ”

Product categories:

- standard and complete premixes
- concentrates
- feed mixes (in both meal and granulated form)
- raw materials (enzymes, antioxidants, colouring agents, emulsifiers, synthetic amino-acids, MCP, gluten, soya, sunflower seed meal, maize germ etc.)

The strength of our company lies in professional consulting, management support, and consultation in the areas of feeding, reproductive biology and animal health monitoring systems, and also in laboratory tests. ”

Our services:

- **Consultancy**
livestock nutrition, reproductive biological, animal health monitoring system, veterinary consultation, laboratory tests, technology, farm management, possibilities for innovation
- **On-site assessment**
- **Preparation and development of feed recipes**
- **Cost optimisation**
- **Further training programmes**
- **Periodical – continuous technical service**
- **Addressing ad hoc problems**

We work together for success

We are in constant contact with domestic and foreign universities and educational institutions, and we also take part in several agricultural support projects.”

The future is ahead of us

Agrofeed is committed to supporting the professionals of the future.

**SZÉCHENYI
EGYETEM**
UNIVERSITY OF GYŐR

One of the greatest prides of our professional support is our monogastric-themed international conference called **AIMS**, with several hundred people, which we organize every two years, where all leading companies in the field of feeding are represented at the symposium. Professional speakers and guests come to us from nearly 40 countries.

”

We share knowledge

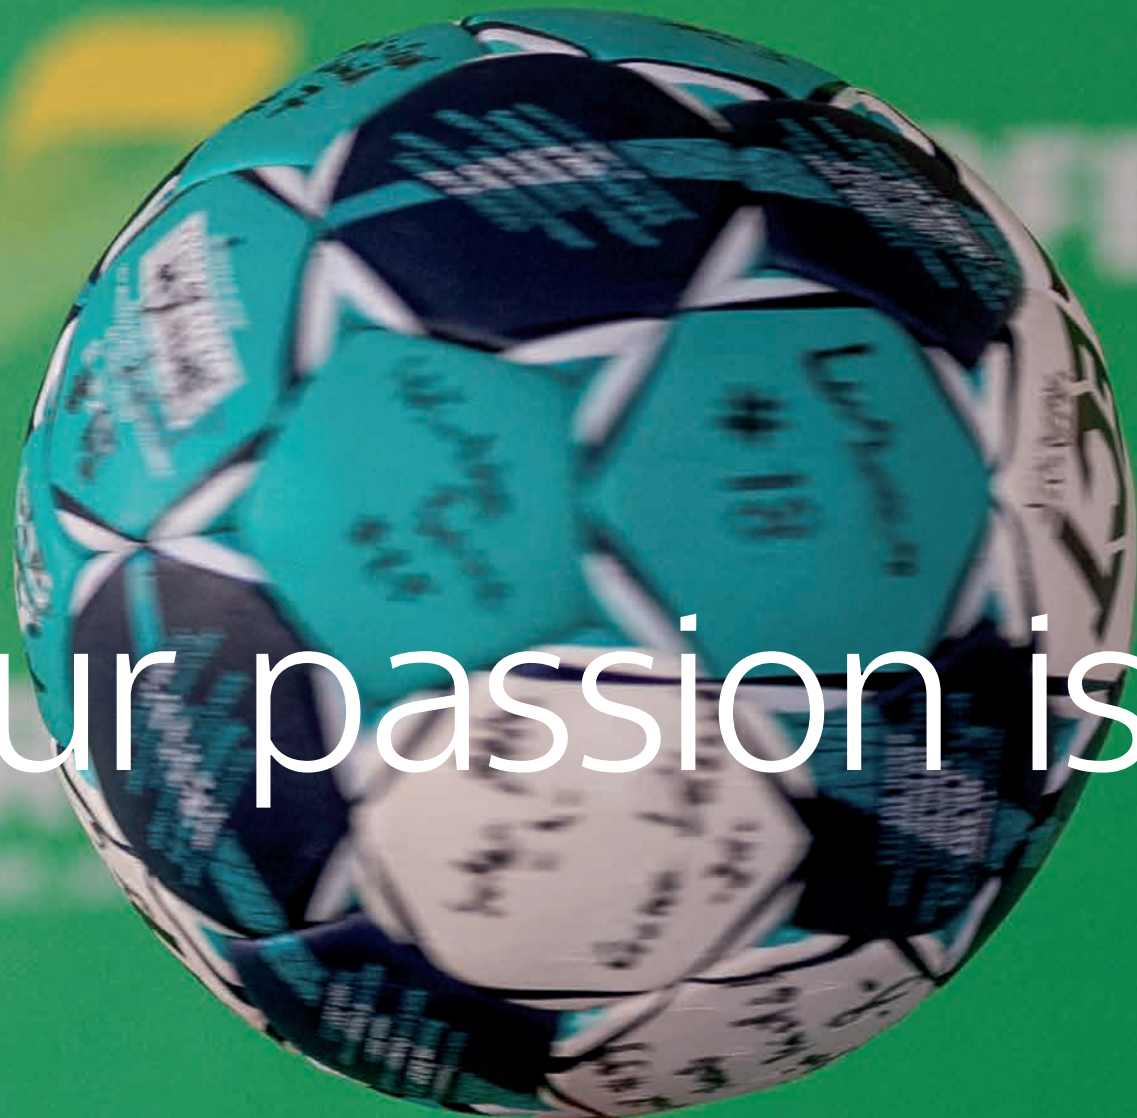

Agrofeed is a regular participant in domestic and international agricultural exhibitions, and in many cases we also appear as a sponsor at these events.

As the saying goes, every bite is better together. Successful joint work is essential for tasty snacks. We also live and work according to this. ”

Shared success,

which feeds

Our passion is the sport in Győr

As a gold-level supporter of the 2017 International Youth Olympics, EYOF and as the name sponsor of the ETO UNI's handball team and the Széchenyi University's basketball team we are committed to the successful participation of sports in Győr!

“As a company based in Győr we place great emphasis on supporting the city's cultural and sports life

We are prominent sponsors of the **750 anniversary events of Győr** and a supporting member of the **Vaskakas Puppet Theatre.**”

The support of the **Győr Hospital's pediatric otology department** and the **Children's University** is also extremely important to Agrofeed. Walking around in the city, you can see several public sculptures that we helped to create.

Culture and health
