

**N-agró**

## ABOUT COMPANY

N-Agro was officially registered on November 21, 2022. The company's core focus is the breeding of high-yield, purebred Holstein dairy cattle and the production of high-quality raw milk.

## **FOCUS ON DAIRY**

Before shifting to the dairy sector, the enterprise specialized in breeding beef bulls, maintaining a herd of up to 600 heads. However, after an in-depth study of the dairy industry's potential, the team made a strategic decision to focus entirely on this promising direction.

# FARMS OF THE FUTURE

The development of the project was inspired by practical visits to leading dairy farms, including the Hunland agricultural complex in Hungary, and one of the key production facilities of the EkoNiva Group in the Moscow region. These experiences provided the team with valuable insights into efficient production models and modern approaches to dairy farming. They served as a reference point for shaping the farm's concept and confirmed that a technological and sustainable model can and should be adapted to the conditions of Kyrgyzstan.

## **FROM START TO GROWTH**

Currently, the farm maintains approximately 100 head of registered Holstein cattle. N-Agro has successfully completed the project initiation phase and moved into active implementation. Having confirmed the long-term profitability of the chosen strategy, the company began scaling operations — launching the construction of a modern dairy farm designed for 500 cows, featuring a high level of automation, a digital herd management system, and a strong emphasis on animal welfare.

## INTERNATIONAL TEAM EXPERIENCE

---

A professional and cohesive team has become one of the key factors behind this confident start. The company's livestock specialists have completed training at top dairy farms in Denmark and Germany, while veterinary control is overseen by a specialist educated in Novosibirsk with hands-on experience at the EkoNiva agroholding. This combination of advanced technologies and locally adapted expertise allows the project to implement effective solutions from the very first stage.

The background image is a blurred photograph of a farm scene. On the left, a person wearing a purple and white checkered shirt is partially visible. In the center, there is a large white container, possibly a milk can. To the right, a group of people and a dark-colored animal, likely a cow, are standing near a wooden fence. The overall scene is out of focus, emphasizing the text overlay.

## **PRODUCT DEVELOPMENT**

At present, the farm specializes in the production and supply of raw milk to processing companies. Looking ahead, N-Agro plans to increase its milk output and establish its own processing line for premium dairy products. The core focus remains on delivering consistent quality and meeting modern standards and market demands.

## COMPANY MISSION

The company's mission is to build an efficient, technologically advanced, and sustainable dairy farm capable of competing with the best European models. Now more than ever, it is essential to keep pace with the times, implement modern approaches, and unlock the full potential of Kyrgyzstan's agricultural sector. The country possesses abundant natural resources, hardworking and entrepreneurial people — and N-Agro's goal is to harness these strengths to build a strong, stable agribusiness focused on quality, efficiency, and long-term development.
